ITX E-Globaledge Corporation Announces Sales and Marketing Partnership with WindSpring, Inc.

Advanced compression technology to be marketed in Japan, China and Korea

June 25, 2007 ITX E-Globaledge Corporation ("ITX-EG") and WindSpring, Inc., an advanced compression technology and software provider headquartered in San Jose, California, USA, today announced a sales and marketing partnership agreement. Under the terms of the partnership WindSpring's patented Data Miniaturization Technology (DMT™) will be represented by ITX-EG to markets in Japan, China and Korea.

ITX-EG will initially target opportunities for in-dash GPS navigation systems and personal navigation devices (PNDs) where WindSpring's DMT technology improves digital mapping application capabilities. Key benefits include the ability to deliver richer and more relevant content and services, while reducing the overall size of the mapping data and increasing performance.

WindSpring's technology miniaturizes application data into a patented Micro Data Format (MDF™) This unique, new data standard fully enables high-speed data manipulation including edit, seek, search and display while in the compressed state. No decompression of the data is ever required.

"The opportunity to represent a company such as WindSpring is very rare. Their DMT technology introduces capabilities that were previously unavailable for in-dash and PND products," said Tomoo Yamadera, executive vice president, ITX E-Globaledge. "We are very pleased to offer WindSpring's new technology and participate in a growing and changing market."

"Much of the increasing demand for interactive mapping and navigation applications is being fueled by companies located in the markets where ITX-EG is most influential," said Tom Hunt, WindSpring's President and CEO. "These

markets are highly strategic for us, and ITX-EG's strong relationships will be vital to our sales and marketing efforts in the coming years."

About ITX E-Globaledge Corporation

ITX E-Globaledge Corporation is a full service electronic device/software solution company located in Tokyo, Japan. With 17 years of successful track record in always providing unique and cutting-edge technologies ahead of the market in Japan and around the world, ITX E-Globaledge Corporation has established its reputation as an innovator in Information Technology market worldwide.

About WindSpring, Inc.

WindSpring is a provider of advanced compression software for the digital mapping and navigation markets. The company's patented data miniaturization technology (DMT™) eliminates the need for file decompression, drastically reduces the data footprint of large files, and allows total data manipulation while in the reduced state. The company is focused on in-dash navigation, personal navigation devices, trucking/logistics, Internet/consumer wireless and enterprise/public sector GIS. More information about the privately-held, San Jose, California-based company is available at www.windspring.com.
