WindSpring Announces DMTools 5.0 – Groundbreaking Mobile Data Optimization Technology

Patented technology ensures efficient data management and high performance for mobile applications on any device

SAN JOSE, Calif., March 1, 2010 - WindSpring, Inc., a leader in mobile data optimization technologies, today announced DMTools 5.0, the first suite of software tools for seamlessly optimizing application data on mobile devices. DMTools enables sophisticated data analysis, advanced compression (which includes the ability to edit or search a compressed data set without having to decompress it), and extensive utilities for tuning data for applications. DMTools is available for Windows, Mac OSX and Linux desktop operating systems via most integrated development environments, and has support for iPhone, Android, WinCE and Symbian mobile devices.

DMTools overcomes a number of significant limitations common to the use of traditional compression solutions in mobile applications. It combines the power of patented advanced compression with libraries that provide consistent APIs for read, edit, search and data access, along with utilities which ensure efficient data management and high performance for mobile applications on any mobile device or platform.

“We created DMTools because we understood that thinking about mobile application data only in terms of applying compression was not the answer - the ability to manage memory utilization and application performance was equally important,” said Tom Hunt, WindSpring president and CEO. “DMTools gives developers better control not only of their application, but of how their application works and interacts with the data.”

DMTools is available now. For additional information, visit www.WindSpring.com

About WindSpring, Inc.

WindSpring, Inc. creates mobile optimization technologies that ensure efficient data management and high performance for mobile applications on any device. The company's DMTools software suite delivers advanced data compression, access and optimization, and includes SDKs for the predominant desktop and embedded OS/IDE environments. Founded in 2004 and based in San Jose, WindSpring technology powers more than a million devices around the world. The company is privately-held and profitable. For more about WindSpring visit www.windspring.com.
